FM-22////SMH-5DR

IR Receiver Modules for Remote Control Systems

Description

The **FM-22 SMH-5DR** series are miniaturized receiver for infrared remote control system. The PIN Photodiode and preamplifier are assembled on

lead frame. The epoxy package is designed as IR filter. The module has excellent performance even in disturbed ambient light application and provides protection against uncontrolled output pulses.

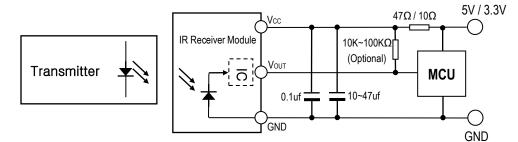

①GND ②Vcc ③Vout ④GND

Features

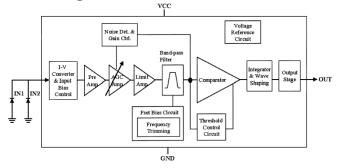

- Surface Mount Package.
- Supply Voltage Range: 2.7V to 5.5V
- Supply Current : 0.55mA
- Epoxy IR filter characteristic : 940nm
- Internal filter for PCM frequency
- Open collector output [built-in Pull-up resistor(38K)]
- Data rate of 2000 bit/s
- Short bursts possible(≥ 6pulses / t Burst)
- Enhance immunity against all kinds of disturbance light
- Continuous data transmission possible
- Meet RoHS

Application Circuit

R-C filter recommended to suppress power supply disturbances. R-C filter should be connected closely between V_{CC} pin and GND pin.

Note : \blacklozenge : Suitable for this IR code ; \diamondsuit : Not recommended

The data signal should full-fill the following condition :

Carrier frequency should be close to center frequency of the band-pass.

Burst length should be 160us/burst or longer.

After each burst a gap time of at least 300us is necessary.

Note :

1) Arrival Distance Effected by Environment

2) While the device is operational across the temperature range, functionality will vary with temperature. Specifications are stated only at 25°C unless otherwise noted.

3) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device.

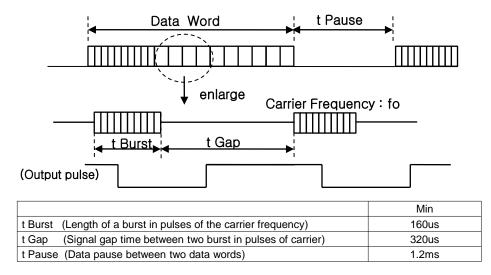

These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied.

Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
